RENÉE PATERNESI

Senior Frontend Engineer
Mendoza, Argentina (UTC-3 / US EST Overlap) | reneepaternesi@gmail.com
LinkedIn: linkedin.com/in/reneepaternesi | GitHub: github.com/reneepaternesi | Portfolio: portfolio-pi-blond-67.vercel.app
Open to remote B2B contractor engagements (USD) — direct with US companies or through agencies

PROFESSIONAL SUMMARY

Senior Frontend Engineer with 13 years shipping fast, high-quality UI across React, Next.js, Vue.js, and Angular for companies ranging from high-growth platforms (Rappi) to fast-moving product teams (Halo Media, Coderhouse). Comfortable owning features end-to-end, adapting quickly to new stacks, and using AI-augmented workflows (Claude, Gemini, Copilot) to accelerate delivery. Remote-first professional with a proven track record collaborating with international, US-based teams across time zones.

TECHNICAL SKILLS

- **Frameworks & Libraries:** React, Next.js, Vue.js (Nuxt.js), Redux, Context API
- **Core Languages:** JavaScript (ES6+), TypeScript, HTML5, CSS3/SASS
- **Quality & Performance:** Web Vitals Optimization (LCP, CLS, INP), Accessibility (WCAG AA), Jest, React Testing Library, Cypress, Enzyme
- **Backend & Infra (working knowledge):** REST APIs, Docker, Vercel
- **Architecture & Styling:** Micro-Frontends, Design Systems, Tailwind CSS, Nx Monorepos, Styled Components, Storybook
- **Engineering Tools:** AI-Augmented Workflows (Claude, Gemini, GitHub Copilot), GitHub Actions, Jira, Figma

PROFESSIONAL EXPERIENCE

Halo Media | Senior Frontend Engineer
Jan 2024 – Present

Project: Aptia One Portal (MVP)

- Built from scratch a client-facing employee-benefits enrollment funnel (TypeScript / React 19 / Next.js 16 / Tailwind) with multi-step plan selection, plan suggestions, and client-side cost calculations, on top of the company's existing design system; delivered as an MVP used by the sales team to demo the product to prospective clients.
- Led end-to-end typography migration and systematically replaced Tailwind CSS primitive classes with semantic design tokens, eliminating manual style overrides and standardizing UI consistency across the codebase.
- Adopted AI-augmented development practices (Claude & Gemini workflows) for automated code audits, Figma-to-code implementation, and large-scale refactoring to accelerate delivery across sprint cycles.

Client: Mercer — Ascent & PDS (Financial Portfolio Platform)

- Delivered responsive Angular UI within a client-managed VDI environment (Ascent), and built data-driven features for a financial portfolio optimization platform (PDS) — including characteristics management tables, multi-scenario CRUD flows, and inline data validation.
- Led a typography and component theming refactor using Angular Material, standardizing design tokens across login, portfolio management, and analysis pages, and implemented typed API data-layer services with unit test coverage (Angular 9, NgRx).

Project: Ticket Socket

- Developed and maintained UI components within a micro-frontend architecture for an event-ticketing platform, including customer storefronts and embeddable purchase widgets, integrating Stripe payments and Seats.io seating maps.

Coderhouse | Senior Frontend Developer

Feb 2022 – Oct 2023

- Spearheaded a legacy-to-modern stack migration to Vue.js 3 + Nuxt.js for Coderhouse, an online education platform serving students across Latin America, improving initial page load performance and SSR/SEO rendering.
- Designed and built a shared cross-app Vue.js component library, standardizing UI patterns and streamlining feature delivery across product squads.

Rappi | Frontend Engineer

Jul 2019 – Feb 2022

- Helped build Propio, a white-label platform that let small and medium restaurants launch their own online storefronts during the pandemic (2020) — recognized with Rappi's "Golden Moustache" as the highest-impact project in its vertical.
- Helped build, from scratch, a shared React component library used across web squads during the Angular-to-React migration, supporting checkout, payments, and restaurant storefront flows.
- Took part in migrating the restaurant vertical from the Angular monolith to the React ecosystem (2021–2022).
- Wrote unit, integration, and component tests with Jest, React Testing Library, and Storybook to reduce production regressions and keep the UI stable.

AG2 Technology LLC | Frontend Engineer

Feb 2015 – Jul 2019

- Built and evolved a print-on-demand product configurator embedded in Office Depot's website, supporting a growing catalog of customizable products (e.g. business cards) with live print preview, migrating the module's stack from vanilla JavaScript to AngularJS to React over four years.
- Optimized rendering performance and legacy browser compatibility, improving configurator load time and responsiveness.

EARLIER EXPERIENCE (2005 – 2014)

- **Belatrix Software** — Front-End Development (2010 – 2014)
- **Systems Analyst roles** in database migration and enterprise systems implementation — Proyectos Informáticos Suris S.A., Clifton Myers Enterprises Inc., IMPSA (2005 – 2009)

Full background available on LinkedIn.

EDUCATION

- **Information Systems Engineer:** Universidad Tecnológica Nacional (UTN FRM)
- **University System Analyst:** Universidad Tecnológica Nacional (UTN FRM)

LANGUAGES

- **Spanish:** Native | **English:** Advanced / Professional (C1/C2)
